

I am currently a high school teacher
at the same school from which
I graduated years ago.

As a former user of the School Based Health Center,
I feel that there is a long list of valuable reasons why

SBHCs are 100% necessary and effective.

Some of those reasons are:

convenience of care, school physicals, support groups for family issues,
treatment for ailments without leaving school, counseling for emotional issues
and connections to specialty care.

Without the SBHC, many students
would have no other option but to be
without care. 

Our SBHC also stays in touch with students over the summer, which is very important.
